

Manulife Global Multi-Asset Diversified Income Fund¹

Regular income from multiple sources*

- 1** **Broad investment universe** that seeks to provide regular income and diversification
- 2** **Flexible allocation** across traditional and non-traditional asset classes
- 3** **Potential yield enhancement and downside cushion** through equity option strategies

¹ The full name of the fund is Manulife Global Fund - Global Multi-Asset Diversified Income Fund.

*The intention of the Manager to make the monthly distribution and the distribution yield for the Fund is not guaranteed, and the Manager may in future review the distribution policy depending on prevailing market conditions.

A multi-asset income fund in a low yield environment

Seek more income sources with a broad investment universe

Performance and yields across asset classes can fluctuate in different economic cycles. Investors can broaden their investment universe within bonds and equities by diversifying across sectors and geographies which can in turn provide low correlated income sources and also increase overall yield stability.

Average yields of each income asset per annum over the past 15 years²

Fixed income

Equity and equity-related securities

Exposure to sustainable high income generating assets to drive asset allocation

Aims to generate stable income and balance portfolio risks

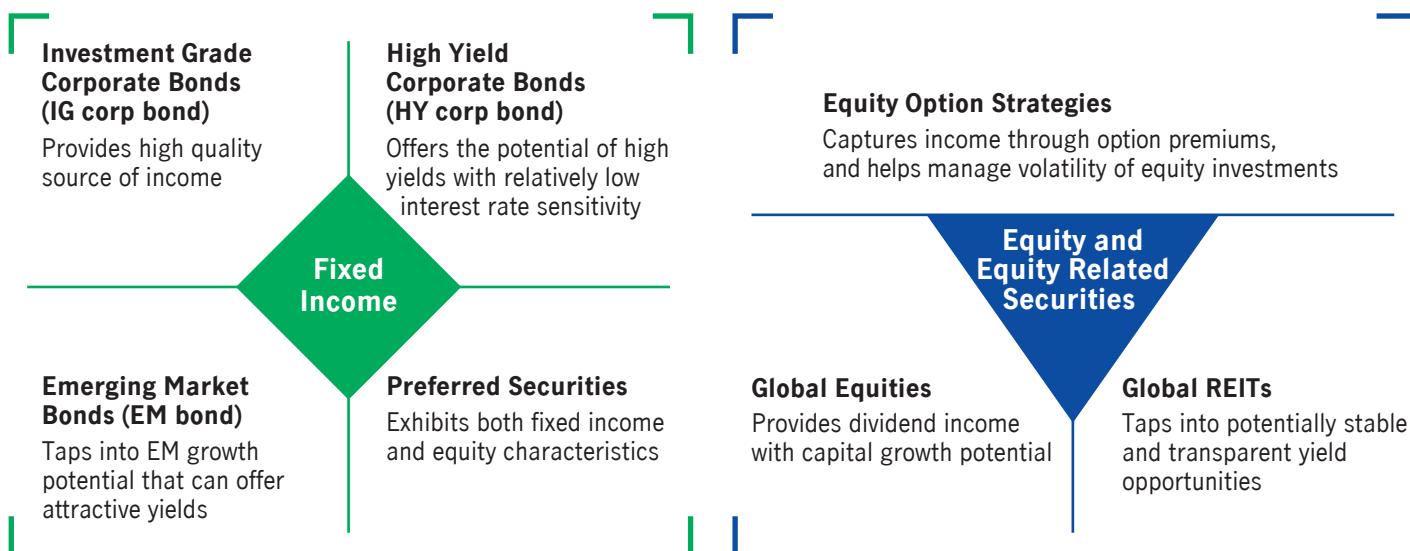

Pursue capital appreciation opportunities with equity option strategies aiming to gain income and manage downside risks

Source: Manulife Investment Management, Bloomberg, MSCI, as at 31 March 2021. This information is for illustration purposes only, and does not guarantee future returns. Positive distribution yields do not imply positive returns. Average yield per annum is based on historical yields for past 15 years, with the exception of that for Equity option strategies, which is based on proprietary research since 2008 by data from Manulife Investment Management.

Flexible and diversified allocation by blending traditional and non-traditional income sources

The flexible and unconstrained allocation approach of the Fund provides diversification benefits by integrating traditional and non-traditional asset classes which have moderately low correlation and consequently provide potentially better risk-adjusted returns compared to single asset class. Non-traditional asset classes such as REITs and preferred securities not only provide alternative sources of income but can add value to an investor's portfolio as they provide relatively higher yields compared to traditional asset classes while having moderately low correlation.

Traditional and non-traditional asset classes

Traditional and non-traditional income sources tend to be less correlated*

Traditional income source	Non-traditional income source			
	Global REITs	Preferred securities	Equity-related securities - Covered call	Equity-related securities - Put writing
Investment grade corporate bond	Relatively low	Relatively low	Relatively low	Relatively low
High yield corporate bond	Moderate	Moderate	Moderate	Moderate
Emerging market USD bond	Moderate	Relatively low	Moderate	Moderate
Global equities	Relatively high	Moderate	Relatively high	Relatively high

■ Relatively low correlation
 ■ Moderate correlation
 ■ Relatively high correlation

Source: Bloomberg. Correlation coefficient is calculated based on weekly performance from July 2006 to June 2021. Relatively low correlation refers to correlation coefficients with absolute value equal to or smaller than 0.5, moderate correlation refers to correlation coefficients with absolute value between 0.5 and 0.75(inclusive), and relatively high correlation refers to correlation coefficients with absolute value above 0.75.

Potential downside buffer through option strategies

The use of option strategies can potentially increase the overall yield of an investor's portfolio, as well as provide downside buffer during periods of market downturn. This can be achieved through the writing (or sale) of call and/or put options.

1. Enhancing yield

The premiums collected from option writing can act as an additional source of income for investors.

2. Providing downside protection

The call premiums can help to cushion or even offset falling equity prices, effectively acting as a partial hedge.

During several market corrections since 2000, equity option strategies have proven to provide a downside buffer with lower drawdowns than the broad US equity market (refer to the chart is on the right). This has become an important and popular risk management tool and has been widely adopted by many institutional investors.

Performance during market volatility

	S&P 500 Index	Equity option strategies
Net/dot.com bubble – 9/11 attacks (09/04/2000 – 10/09/2002)	-47.41%	-31.01%
Global financial crisis (10/09/2007 – 03/09/2009)	-55.25%	-36.80%
China-US trade dispute and concerns of a depression in 2018 (09/20/2018 – 12/24/2018)	-19.36%	-15.27%

Important notes:

Manulife Global Fund (the "Company") is an open-ended investment company registered in the Grand Duchy of Luxembourg. The Manulife Global Fund – Global Multi-Asset Diversified Income Fund (the "Fund") is recognised under the Securities and Futures Act of Singapore for retail distribution. The Company has appointed Manulife Investment Management (Singapore) Pte. Ltd. as its Singapore Representative and agent for service of process in Singapore. The information provided herein does not constitute financial advice, an offer or recommendation with respect to the Fund.

Opinions, forecasts and estimates on the economy, financial markets or economic trends of the markets mentioned herein are not necessarily indicative of the future or likely performance of the Fund. **The Fund may use financial derivative instruments for efficient portfolio management and/or hedging.** Investments in the Fund are not deposits in, guaranteed or insured by the Manager and involve risks. Past performance of the manager or sub-manager is not necessarily indicative of its future performance. The value of units in the Fund and any income accruing to them may fall or rise. Past performance of the Fund is not necessarily indicative of future performance. Investors should read the Singapore prospectus, and seek advice from a financial adviser before deciding whether to purchase units in the Fund. A copy of the Singapore prospectus and the product highlights sheet can be obtained from Manulife or its distributors. In the event an investor chooses not to seek advice from a financial adviser, he should consider whether the Fund is suitable for him.

Distributions are not guaranteed. Investors should refer to the Singapore prospectus for the distribution policy of the Fund. The Directors of the Company shall have the absolute discretion to determine whether a distribution is to be made in respect of the Fund as well as the rate and frequency of distributions to be made. Distributions may be made out of (a) income, or (b) net capital gains, or (c) capital of the Fund, or (d) gross income while charging all or part of the fees and expenses to capital, or (e) any combination of (a), (b), (c) and/or (d). Past distribution yields and payments are not necessarily indicative of future distribution yields and payments. Any payment of distributions by the Fund is expected to result in an immediate decrease in the net asset value per share of the Fund.
